SYDNEY

Cerebral Palsy
ALLIANCE

Driving, Transport, and Autonomous Vehicles

What is this study about?

We are a multi-stakeholder research team, including people with lived experience, engineers and researchers conducting a research study about barriers to driving and car accessibility for people with cerebral palsy. We would love to hear your experiences about how we can improve the driving experience.

Who can participate?

We are looking for participants who have cerebral palsy and are 18 years and older.

What's involved?

We invite you to fill out a 15-30 minute survey where you will be asked to identify what you find difficult about driving and car accessibility, as well as your thoughts about the use of autonomous vehicles (driverless cars).

The survey responses will inform researchers and car manufacturers to better implement new driving technology to accommodate the needs of people with cerebral palsy.

If you are interested in participating please click [here](#), or scan the QR code (survey link).
