

Playtime Matters

Help Us Co-Design Accessible Toys!

The University of Sydney and Cerebral Palsy Alliance Research Institute are seeking to collaborate with families to better understand how to co-design accessible toys that are well-suited for children with significant motor and physical needs.

You may qualify if your child:

- Is 2 years or older
- Has neuromotor disability and require mobility aids
- Might benefit from using accessible toys

Participation involves:

- Interviews where you can share personal stories
- Option to share video footage of playtime (either existing or newly created)

Every Play Session Tells a Story, What's Yours?
